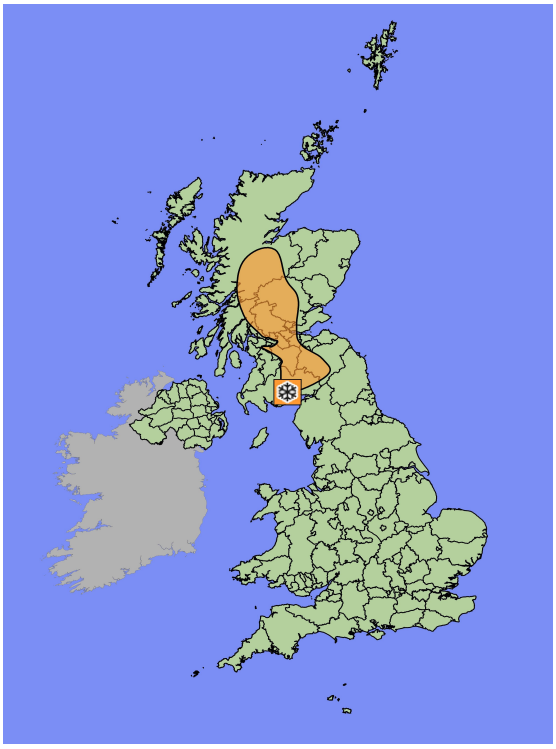
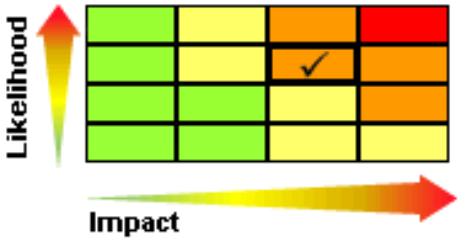
National Severe Weather Warning Service





Chief Forecasters Assessment
A deep low to the north of Scotland has brought with it strong westerly winds, dragging cold air of Canadian origin across northern UK. Showers in this air stream will turn increasingly to snow which will blow and accumulate in drifts on higher ground.

The showers may ease for a time overnight, before a band of more frequent and heavy sleet and snow showers moves southeast to affect this area during the Tuesday morning rush hour.

The Met Office have issued an **Amber Warning** of **Snow**

Valid from **17:00 on Mon, 04th Feb 2013** until **09:00 on Tue, 05th Feb 2013**

Showers of snow will be frequent and heavy at times with drifting and temporary blizzard conditions in the westerly gales. Amounts of snow will be variable, but accumulations of 10 to 20 cm are expected in some areas, especially on routes above 100 metres.

The public should be prepared for possible disruption, especially to travel.
